SCALIX Advanced Administration and Troubleshooting Training

This 3 day instructor-led hands-on course provides students with the advanced knowledge to administer and troubleshoot the Scalix server. It also covers everything to make an installation of a Scalix Server more reliable, high-available and secure.
The course is followed by lab sessions that allow the students to practise the gained knowledge to immediately use the information back in their environment.

Day 1 modules are:

- Multiserver and multi-instance configuration
- Clustering and High-Availablity

Day 2 modules are:

- Synchronize directories and folders
- Service router and mail filters with QoS
- Access control lists

Day 3 modules are:

- Online Backup/Single User Restore
- Request Server Scripting/Automation
- Mailbox/Queue Troubleshooting
